Discussion 8: Recursion II

Mystery Blocks

What do each of the blocks below do?

```
Reports true if 2.
   +mystery1+ st : +
                                                               +mystery3+ num + num2 +
                                                                                                 Reports num
                                        there is a
                                                                                                 to the power of
   if empty? (Ist
                                                               if ( num2 = 0 )
                                        number in the
                                                                                                 num2
    report false
                                                                report 1
                                        input list
    if is item 1 ▼ of 1st a number ▼ ?
                                                                report num x mystery3 num num2 - 1
     report (true
     report mystery1 all but first of Ist
3.
     +mystery2+ word + letter +
                                         Reports the
                                         number of
     if \left( \text{length of word} \right) = 0
                                         times the input
     report 0
                                         letter appears
                                         in the input
     if letter = letter 1 of word
                                         word
       report 1 + mystery2 all but first letter of word letter
       report 0 + mystery2 all but first letter of word letter
```

More Practice

a. Write a block that reports the index of the first occurrence of a letter in a word. You may assume the letter appears at least once in the word.

```
position of s in oski

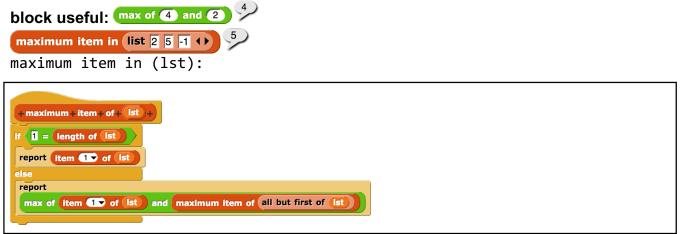

position of (letter) in (word):
  if (letter) = letter 1 of (word)
      report 1
else
    report 1 + position of (letter) in (all but first letter of (word))
```

b. Write a block that counts the instances of an item in a list.

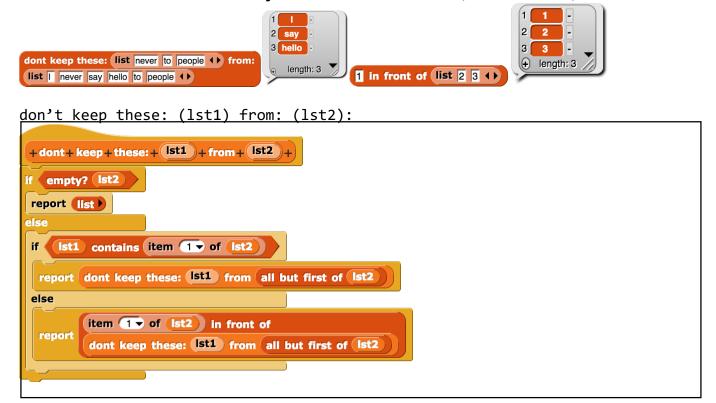

```
count (item) in (1st):

| Count (item) in (1st):
| Count (item) in (1st):
| Count (item) in (1st):
| Count (item) in (1st):
| Count (item) in (1st):
| Count (item) in (1st):
| Count (item) in (1st):

| Count (item) in (1st):
| Count (item) in (1st
```

c. Write a block that finds the maximum item in a list of numbers. You may find the following

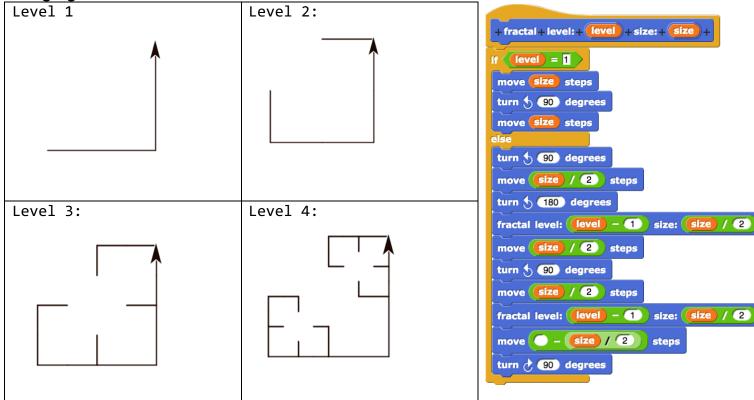

d. Write a book that takes in two lists, and reports a version of the second list without any of the items in the first list. You may find the in front of block, shown below, useful.

Fractal

Write out the code to create the following fractal. The sprite starts in the bottom left corner,

facing right.

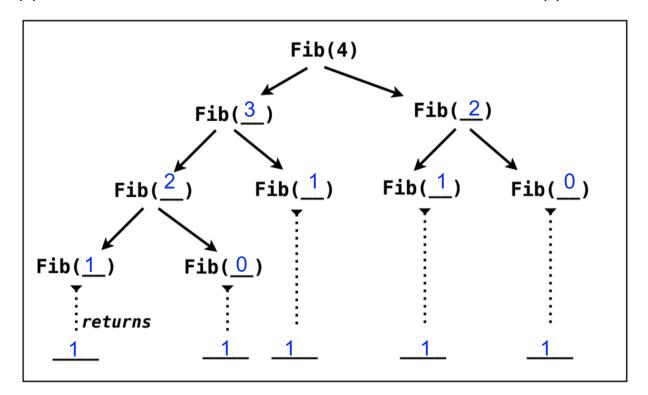

Fibonacci

The Fibonacci sequence is defined as follows: 1, 1, 2, 3, 5, etc., where each number is the sum of the two previous numbers in the sequence.

(a) Fill in the code below to find the nth Fibonacci number:

```
Fibonacci(n)
if n < 2:
    report 1
else
    report Fibonacci(n - 1) + Fibonacci(n - 2)</pre>
```

(b) Now, fill out the tree below to visualize the execution of Fibonacci(4)

(c) What is the runtime of Fibonacci? Exponential
